### **Research** Objectives

Explore available experimental data

Develop barotropic and baroclinic models for Choctawhatchee River and Bay System

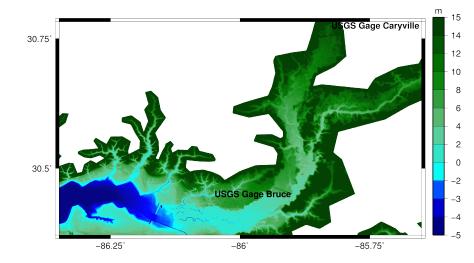

- ► Leverage and improve existing ADCIRC meshes
- Depth-averaged currents using barotropic ADCIRC 2D
- ▶ Implement ADCIRC 3D barotropic and baroclinic

Model the influence of the incoming freshwater discharge

- ▶ Increase resolution along the Choctawhatchee River
- Implement river boundary condition using synthetic channels
- ▶ Implement incoming diacharge via realistic channel profile

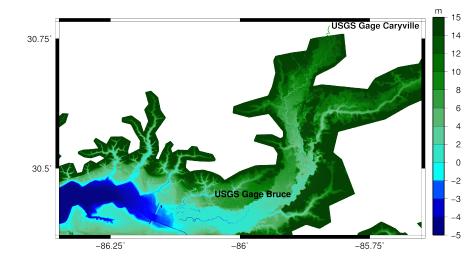

Study the spatial extent and behavior of the freshwater plume coming out through the inlet

Adding resolution along Choctawhatchee River

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 - のへで

Adding resolution along Choctawhatchee River

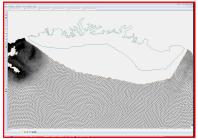

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Adding resolution in the open ocean

Original mesh with highly resolved flood plains

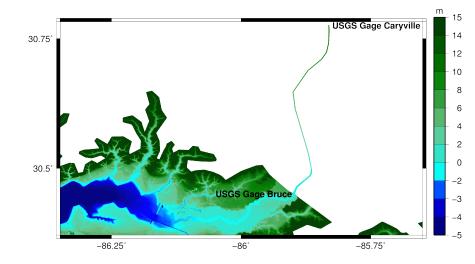

SURA mesh with open ocean resolution = 6 km

Combined mesh maintaining resolution in the flood plains with enhanced resolution in the open ocean

## Model Validation: Water levels

Stage-discharge comparisons

Discharge (cms)	Observed Stage (m)	ADCIRC water levels (m)
100	2.16	0.63
200	2.19	1.1
300	3.45	1.42
1000	5.0	3.1

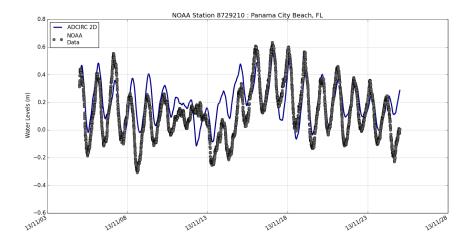

Table: USGS gage at Bruce, FL

Discharge (cms)	Observed Stage (m)	ADCIRC water levels (m)
100	13.6	13.33
200	14.67	13.85
300	15.08	14.28
1000	16.37	16.35

Table: USGS gage at Caryville, FL

#### Model Validation: Water Levels

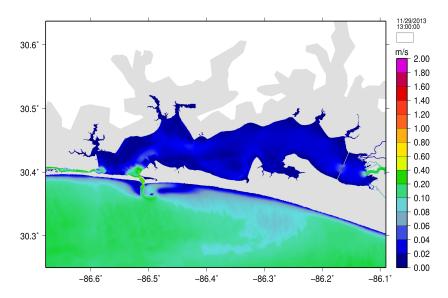

Time series at NOAA gauges

## Ongoing Work

Complete model validation for synthetic and realistic channel

- ▶ Stage/discharge curves at USGS gages
- ▶ SCOPE drifter trajectories
- ▶ Satellite Imagery
- ▶ NOAA gauges

Implement incoming discharge through realistic channel profile
